

Spot Weld Cutter Sharpener

The cost of the Sharpener is \$1,250.00.

We have machines in use for more than 15 years but for this calculation we assume a life span of 10 years.

When used properly the wheel should be replaced after 1000 sharpenings. It will take a body shop technician less than 2 minutes to sharpen a drill bit. For this calculation we assume the tech makes \$20.00 /hour.

Cost per sharpening: ¢ .45 use of the wheel
 ¢ .70 labor
 ¢ .80 amortization of machine and power.
 Total: \$1.95

Average cost of a new drill bit is **\$20.00**
Most drill bits can be re-sharpened **15 times** or more.

If a shop uses **15 bits per month** it would spend:

$15 \times \$20.00 = \300.00 for new bits per month or
 $1 \times \$20.00$ (for 1 new bit) + $9 \times \$1.95$ (for sharpening) = \$ 37.50

Using the S-115 Sharpener would save \$262 .00 per month.
Or a Return On Investment in: $\$1,250.00 / \$262.00 = 4.8$ months.

Which other body shop tool gives you such a ROI?
